

This project is fully based on MYSQL. The data is given of different stock named as BAJAJ AUTO, EICHER MOTORS , HERO MOTOCOPS , INFOSYS , TCS and TVS MOTORS . The Main agenda of this project is to create table from given data and then create master table from it from this we have to find the profit of the stock which is already given. For this we will see and checked different signal i.e BUY/SELL/HOLD.

The project is about stock market data analyse . As we do this project we will now able to understand how stock market data analyse . The project cover the basic as well some advance MYSQL which has though in module as well in online class which is held through zoom from upgrad learning .
